

Sabertec wants to partner with you!

As part of the **American Recovery and Reinvestment Act**, the EPA has developed the **Clean Diesel Emerging Technologies Program (CDET)**. The CDET is a program through which the EPA is granting \$20 million to Eligible Entities to purchase new, emerging diesel filtration technologies. And you Qualify!

This is your opportunity to:

- ✓ *Improve your community's environment by reducing toxic particulate emissions.*
- ✓ *Improve human health conditions within your community by cleaning the air.*
- ✓ *Make your community a national environmental leader by pioneering innovative environmental technology.*
- ✓ *Become a worldwide example of how to turn your air pollution into cash flow.*
- ✓ *Ensure that your community benefits from the Federal Stimulus Package.*

Who is Sabertec and what do we offer?

Sabertec is an environmental technology company that specializes in the development of emissions reduction technologies. Sabertec's diesel filtration technology, IDPF, is a serviceable, non-catalytic diesel particulate filter that is proven to reduce total particulate emissions over 85%.

What do you need to do?

If you have a fleet of diesel vehicles and/or equipment that you'd like to equip, then you need to partner with Sabertec!

1. Partner with Sabertec.
2. Work with Sabertec to submit an Application for Grant Funding.
3. Work within a Cooperative Agreement with Sabertec and the EPA to collaborate, improve and monitor the success of the program.

What's the catch?

Other than improving the environment and human health conditions in your community, and having the federal government pay for you to do it, there are none. The challenge is this: **Applications for Grant Funding are due on May 5th, 2009.** So there's no time to waste! Don't get left behind. Equip your fleet and green your community courtesy of the Federal Government Now!

What is your first step?

Work with your Sabertec representative to set up a time for Sabertec to meet with you between April 13 - April 22. Sabertec will determine what you need in order to equip your fleet. Sabertec will then work with your organization to draft an Application for Grant Funding and submit it to the EPA. We'll then get busy making your community an environmental leader and a better place for its citizens to live.

-We look forward to working with you!
